Users' Guide

checkGPA Users' Guide

STEP-TO-STEP GUIDE.

Grade system

- Enter your college grading system. To start enter your college grading letter (GD) which could be A, B, C, D, E, F and grading point (GP) which could also be 5, 4, 3, 2, 1.

Calculate GPA

- Enter your course codes, grades (grading letter) and credit units/credit hours/course units.

History

- Next, after step 1 and step 2 check history and there you will see your GPA.

HOW IS GPA CALCULATED ?

Most colleges use whats known as:

- A grade system where each grade letter are assigned grade points. Example grade A could be 5 points, grade B could be 4 points.
- A credit unit, where each course is assigned one. For example DAN 111 is assigned a credit unit of 3.

Let us assume this is the grading system of your college

GRADE	POINT
A	5
B	4
C	3
D	2
F	0

This means if in DAN 111 you got A and the course has a credit unit of 3. Your total quality unit will be 15 meaning 5×3 . This will be repeated depending on the number of courses you will be taking that college year. Next the total sum of the quality units and credit units should be taken.

Finally divide the total quality units by the credit units.

HOW THE TROPHIES ARE AWRADED.

The gold, silver and bronze trophies are awarded based on how exceptional your GPA is:

The highest possible GPA you could get depends on your college highest grading letter. For example using the table above the highest grading letter is A and has a grading point of 5 this means the highest GPA for this college is 5 this will vary depending on the college you are in.

For the gold trophy, checkGPA will subtract 0.5 from the highest possible GPA. For example using the grading system above 0.5 will be subtracted from 5 that will give 4.5, so the gold trophy will be awarded to anyone with a GPA greater or equal to 4.5.

checkGPA Users' Guide

For the silver trophy, checkGPA will subtract 1 from the highest possible GPA so anyone with a GPA greater or equal to 4.0 will be awarded the silver trophy.

For the bronze trophy, checkGPA will subtract 1.5 from the highest possible GPA so anyone with a GPA greater or equal to 3.5 will be awarded the bronze trophy.

COLOUR CODE

A A+ A++ A* A** A1	
B B- B2 B3	
C C3 C4 C5 C6	
D D7 D8	
F F9	
Others	

MISTAKES PEOPLE OFTHN MAKE.

- Repeated entries in the grading system. For example repeating the same grading letter more than once with different grading letter, you will not get your desired result because this will affect the calculate GPA.

GRADE	POINT	
A	5	
A	4	

- Trying to use a grading letter in the calculate GPA section that has not been given a grading point in the grading system section this will not work.
- Having more than the certain length (infinity) because you are joking around with the web application, this will cause the web application to be unresponsive and you will not be able to delete just that entry. The only way to go around it is to delete all the entries.

COURSE CODE	GRADE	CREDIT UNIT	
DAN 111	A	Infinity	
DAN 112	A	3	

Trying to delete only the entry with credit unit infinity will not work.

COURSE CODE	GRADE	CREDIT UNIT	
DAN 111	A	Infinity	
DAN 112	A	3	

Deleting all entries will work.

checkGPA Users' Guide

WHY SHOULD I USE THIS ?

Why should you not:

- Reduces the stress of having to do it with a pen, paper and calculator.
- The web application keeps the history of your last calculation so you don't have to always repeat the same procedures all the time.
- You can print directly from the history page using command p for Mac and control P for Windows. This is for those that will love to have a copy.
